Author guidelines for *Journal of Molecular Endocrinology*

The scope of the journal

Molecular and cellular aspects of endocrine and related systems.

Types of papers

Original research papers, rapid communications, short reviews and commentaries are considered.

Submission of manuscripts

Please submit online using the manuscript central system. Guidelines for this can be found at www.endocrinology-journals.org/misc/onlinesub_man.shtml. Online submission and peer review can help to achieve more rapid publication than the paper-based system.

If you are unable to submit online, please send your manuscripts and a disk containing all files to:

The Editor-in-Chief, *Journal of Molecular Endocrinology*, 22 Apex Court, Woodlands, Bradley Stoke, Bristol BS32 4JT, UK (Tel: +44-1454-642220; Fax: +44-1454-642201).

There is **no** charge for submitting papers nor will there be any subsequent page charges.

General instructions

When submitting a paper for consideration, authors must give written assurance that the work has not been, and will not be, submitted for publication elsewhere until the journal has reached a decision on whether to publish the paper. If rejected the authors are free to submit elsewhere; if accepted the assurance automatically extends indefinitely. Revised papers returned after three months will be treated as new submissions. It will be assumed that submitted manuscripts carry the approval of all the authors.

Authors are required to acknowledge all of the major sources of funding relevant to the research reported in the Acknowledgements section. A declaration should be included in the Acknowledgements/Funding section that there is no **conflict of interest** that would prejudice its impartiality. If there is a potential conflict of interest, it should be fully declared within the text of the article.

Manuscripts must be in English and spelling should follow *The Shorter Oxford English Dictionary* or *Merriam-Webster's Collegiate Dictionary*. All abbreviations must be defined. Manuscripts should be printed double-spaced, preferably in a Times font, and with a size of at least 10 point.

To expedite refereeing the author should provide duplicate copies of papers quoted as 'In Press', particularly those concerned with methodology.

Authors should also provide a fax number and an email address, where possible, to facilitate the rapid processing of their paper.

Use of computer disks

If your paper is accepted for publication, or you are asked to revise, a word processor file for your paper and high resolution figures (see Figures section below) will be requested. (The PDF files used for online peer review are not suitable for typesetting.)

Please provide files no larger than 15 MB via email to jme@endocrinology.org, or on PC-formatted disks if possible (this option is also available on many Macintosh systems). The preferred word processing format is RTF, but files produced using other packages can be translated.

Original research papers

Title page

This should contain the complete title, names of all authors, full addresses of all institutions (the address of the laboratory where the work was carried out should be given first) and a short title for page headings.

Abstract

The abstract (which should be no more than 5% of the length of the paper) should summarize the main findings of the paper and the conclusions reached.

Text

The text should generally follow the format: Introduction, Materials and Methods, Results, Discussion.

References

In the text, references should be cited by giving the name of the first author *et al.* where there are more than two authors. In the reference list a minimum of ten authors should be given and the titles of the papers and the journals **should be written in full**. Examples of reference style are as follows:

See RH, Calvo D, Shi Y, Kawa H, Luke MP & Yuan Z 2001 Stimulation of p300-mediated transcription by the kinase MEKK1. *Journal of Biological Chemistry* **276** 16310–16317.

Harvey SS 1975 Hypnotics and sedatives. The barbiturates. In *The Pharmacological Basis of Therapeutics*, edn 5, pp 102–123. Eds LS Goodman & A Gilman. New York: Macmillan Publishing Co.

Journal of Molecular Endocrinology reference style for EndNote (version 3 and above) is available from the online author guidelines.

Please note that papers with incorrectly formatted references will be returned and the acceptance date changed to the date of receipt of the correctly formatted paper.

Tables

Table should have full and informative headings and should be supplied electronically and as hard copy on separate pages. Table columns should be set up using simple tabs rather than specialist table layouts.

Figures

General information

Three-dimensional graphs to show two-dimensional data should be avoided and photo- and electronmicrographs should contain scale bars. **The cost of colour reproduction over and above that for black and white will be charged to authors.** This must be paid by credit card before publication. Please see colour charges form at www.endocrinology.org/sfe/colourack.pdf. Please avoid grey or dotted backgrounds in all figures, as these do not always reproduce well. Legends should enable the reader to understand the information contained in figures without reference to the text.

Electronic copies (accepted papers only)

Once a manuscript has been accepted we require higher resolution figures than is obtainable from the IMB PDF file that was used for refereeing. We ask that authors submit a second set of figures conforming to the following guidelines.

Line drawings (e.g. graphs) and illustrations that contain text should be submitted as EPS, high resolution PDFs (You can find

details of how to create high resolutions PDFs at www.endocrinology-journals.org/misc/artwork.shtml or TIFs at 1000 dpi. Scanned images or images from digital capture devices should be submitted as a TIF file: colour images should be saved in CMYK format; mono images should be saved in greyscale format. Authors who intend to submit illustrations that have been assembled in PowerPoint should see the detailed instructions at the same web address as above.

All illustrations in whichever format should conform to the following resolutions: line drawings should be produced at roughly 1000 dpi, colour and greyscale/monotone images should be 300 dpi at the same size they are to be reproduced.

Use of statistical analysis

To enable the reader to judge the validity of results, the number of experimental subjects used (n), and the extent of independent experimental repetition from which data are taken, should be stated. Authors should, where possible, support their conclusions with appropriate statistical analysis. The tests used must be described concisely in Materials and methods, and the results presented clearly. The term 'significant' should not be used without supporting evidence from statistical analysis and the P value used to determine must be stated.

Rapid communications

Rapid communications should be submitted in the usual format for initial consideration. If accepted these papers may be typeset traditionally (time allowing), so the text and figures should be supplied on disk or by email as separate RTF and TIF/EPS files respectively.

However they may be printed directly from the original typescript, so authors should also provide the manuscript as a laser-printed document, in two columns (except for the title and authors) within a maximum text area of 166 mm \times 215 mm (6.5" \times 8.5"). Figures and tables should be positioned within the text of the paper. The rapid communication should not exceed six pages when arranged as described above (i.e. approximately 4000 words) and a pdf file of this version should also be included.

The following rules concern the submission of rapid communications.

1. The observations must be novel and of immediate relevance.
2. Methods must be so described as to permit repetition; results must be adequate to justify claims.
3. Communications must be accompanied by a separate brief statement setting out the author's reasons for requesting rapid rather than regular publication.
4. The Editor-in-Chief will assign the communication to two referees, one of whom may be a member of the Editorial Board.
5. In all instances the decision of the Editor-in-Chief will be final.
6. In general the author guidelines for original research papers apply.

Reviews and commentaries

Short reviews (no more than 4000 words plus references) will be considered and subjected to the usual refereeing process. There are no special requirements for the organization of review material, but papers should in general conform with the requirements for original research papers.

Commentaries on topical subjects are welcome. They should be no more than four printed pages long (2500 words) and will be refereed.

Both reviews and commentaries must include abstracts.

Ethics of experimental procedures on human subjects

Manuscripts must contain a statement that consent has been obtained from each patient or subject after full explanation of the purpose and nature of all procedures used. It must be stated that the investigation was approved by the local ethical committee, functioning according to the 3rd edition of the *Guidelines on the Practice of Ethics Committees in Medical Research Involving Human Subjects* issued by the Royal College of Physicians of London (11 St Andrew's Place, London NW1 4LE, UK; Tel: +44 (0) 207 935 1174; Fax +44 (0) 207 7486 4514; Email: publications@rcplondon.ac.uk; Web: www.rcplondon.ac.uk). Copies of the MRC recommendations can be obtained from the Medical Research Council, 20 Park Crescent, London W1B 1AL, UK (Tel: +44 (0) 20 7636 5422; Fax: +44 (0) 20 7636 6179) or via www.mrc.ac.uk.

Use of living animals

All papers describing experiments on animals should conform with *The UFAW Handbook on the Care and Management of Laboratory Animals*, 7th edition available from www.blackwellpublishing.com. Papers which do not conform with these guidelines or with UK legal requirements cannot be accepted.

Copyright

Articles are considered on the understanding that if they are accepted for publication the entire copyright shall pass to the Society for Endocrinology. All authors are asked to sign a copyright agreement to this effect. To facilitate the processing of your manuscript please complete the form available at www.endocrinology-journals.org/misc/copyrightform.html and submit it with your paper. Requests for permission to reproduce any part of papers published in *Journal of Molecular Endocrinology* should be addressed to the Permissions Secretary.

Self-archiving: institutional and other online repositories

You may archive your final accepted article onto online repositories, subject to various conditions set out in the Society's policy (www.endocrinology-journals.org/misc/archiving_policy.dtl). Consideration for publication is subject to these conditions, which are also set out in the copyright agreement (www.endocrinology-journals.org/misc/copyrightform.html). NIH-funded authors may submit their manuscripts to PubMed Central subject to the same conditions, and should therefore specify an embargo period of 12 months from publication in the journal.

Offprints

A free PDF will be emailed to the corresponding author. Offprints can be ordered on the form accompanying the proof.
