REVIEWS

Progesterone action in breast, uterine, and ovarian cancers
Caroline H Diep, Andrea R Daniel, Laura J Mauro, Todd P Knutson & Carol A Lange
R31–R53

Genetic regulation of murine pituitary development
Karine Rizzotti
R55–R73

P2X7 receptors: role in bone cell formation and function
Ankita Agrawal & Alison Gartland
R75–R88

The Krüppel-like factors in female reproductive system pathologies
Rosalia C M Zimmer, Melissa E Heard, Angela M Simmen, Maria Theresa M Montales, Maera Mary, Samantha Scanlon & John Mark P Pabona
R89–R101

Role of transcription factors in the transdifferentiation of pancreatic islet cells
Talitha van der Meulen & Mark O Huising
R103–R117

Molecular mechanisms of congenital hyperinsulinism
Sozha A Rahman, Azizun Nessa & Khalid Hussain
R119–R129

RESEARCH

Metabolic differences between white and brown fat from fasting rabbits at physiological temperature
105–113

KSR1 is coordinately regulated with Notch signaling and oxidative phosphorylation in thyroid cancer
Jandee Lee, Mi-Youn Seol, Seonhyang Jeong, Hyeong Ju Kwon, Cho Rok Lee, Cheol Ryong Ku, Sang-Wook Kang, Jong Ju Jeong, Dong Yeob Shin, Kye-Hyun Nam, Eun Jig Lee, Woong Youn Chung & Young Suk Ju
115–124

ERK1/2 mediates glucose-regulated POMC gene expression in hypothalamic neurons
Juan Zhang, Yunting Zhou, Cheng Chen, Feijuan Yu, Yun Wang, Jiang Gu, Lian Ma & Guyu Ho
125–135

Contents continued on the inside back cover
The Society for Endocrinology is one of the world’s leading authorities on hormones. Established in 1946, the Society’s aims are to support the advancement of scientific and clinical knowledge and increase research in endocrinology for the public benefit. It also plays a vital role in promoting and supporting endocrinology worldwide.

The Society for Endocrinology offers a range of journals including Journal of Endocrinology, Journal of Molecular Endocrinology, Endocrine-Related Cancer, Endocrine Connections (open access) and Clinical Endocrinology.

For more information visit www.endocrinology.org

Readers are invited to submit their endocrinology images for entry into the Journal of Molecular Endocrinology cover art competition. Winners will be selected by the Editor-in-Chief and will have their imagery featured on the cover of an issue of Journal of Molecular Endocrinology, both in print and online. Winners will be cited in the journal and will receive a professionally printed copy of the journal cover featuring their scientific image.

To enter the competition please email your images to jme@endocrinology.org accompanied with a short caption of 25-30 words explaining what the image depicts, its magnification and who should be acknowledged for its production. Images should be of high quality and resolution of at least 300 dpi at the final published size 220 mm (W) × 100 mm (H).

By submitting an image you warrant that you own the copyright and agree that images may be used in promotional material. Images not selected for use may still be used by the Society for Endocrinology and Bioscientifica for promotional purposes.

The image depicts that in the absence of aldosterone, the mineralocorticoid receptor (green) resides primarily in the cytoplasm of human embryonic kidney (HEK293) cells. In contrast, Gemin4 (red) is located primarily in the cell nucleus. There is little co-localisation of the two proteins. This panel is at 120x magnification on a Nikon C1 confocal laser scanning microscope. The technical assistance of Dr Camden Lo and Monash Micro Imaging in microscopy and imaging are gratefully acknowledged. From Yang et al. 2015 Journal of Molecular Endocrinology 54 149–160.

Credit: J Yang, P J Fuller, J Morgan, C D Clyne & M J Young, MIMR-PHI Institute, Clayton, Victoria, Australia

Contents continued from outside back cover

Whole-exome characterization of pancreatic neuroendocrine tumor cell lines BON-1 and GSP-1
Timon Vandamme, Marc Peeters, Fadime Dogan, Patrick Pauwels, Elvire Van Assche, Matthias Bayens, Geert Morlais, Geert Vandeweyer, Wouter de Herder, Guy Van Camp, Leo J Hofland & Ken Op de Beeck
137–147

GEMIN4 functions as a coregulator of the mineralocorticoid receptor
Jun Yang, Peter J Fuller, James Morgan, Hirotaka Shibata, Colin D Clyne & Morag J Young
149–160

High levels of chorionic gonadotrophin attenuate insulin sensitivity and promote inflammation in adipocytes
Qinyun Ma, Jianxia Fan, Jiqiu Wang, Shuai Yang, Qing Cong, Rui Wang, Qiangian Lu, Ruixin Liu & Guang Ning
161–170

GH/STAT5 signaling during the growth period in livers of mice overexpressing GH
Carolina S Martínez, Verónica G Piazza, María E Díaz, Ravneet K Boparai, Oge Anum, María C Ramirez, Lorena González, Damasía Becu-Villalobos, Andrea Bartke, Daniel Turyn, Johanna G Miquet & Ana I Sotelo
171–184
