The Society for Endocrinology is one of the world’s leading authorities on hormones. Established in 1946, the Society’s aims are to support the advancement of scientific and clinical knowledge and increase research in endocrinology for the public benefit. It also plays a vital role in promoting and supporting endocrinology worldwide.

The Society for Endocrinology offers a range of journals including *Journal of Endocrinology*, *Journal of Molecular Endocrinology*, *Endocrine-Related Cancer*, *Endocrine Connections* (open access) and *Clinical Endocrinology*.

For more information visit [www.endocrinology.org](http://www.endocrinology.org)

**Cover Art Competition**

Readers are invited to submit their endocrinology images for entry into the *Journal of Molecular Endocrinology* cover art competition. Winners will be selected by the Editor-in-Chief and will have their imagery featured on the cover of an issue of *Journal of Molecular Endocrinology*, both in print and online. Winners will be cited in the journal and will receive a professionally printed copy of the journal cover featuring their scientific image.

To enter the competition please email your images to jme@endocrinology.org accompanied with a short caption of 25-30 words explaining what the image depicts, its magnification and who should be acknowledged for its production. Images should be of high quality and resolution of at least 300 dpi at the final published size 220 mm (W) × 100 mm (H).

By submitting an image you warrant that you own the copyright and agree that images may be used in promotional material. Images not selected for use may still be used by the Society for Endocrinology and Bioscientifica for promotional purposes.

**This Issue’s Cover**

The image depicts glycoprotein hormone receptor glycosylation site candidates (in red) mapped on molecular surface representations of a model of the structure of the TSHR extracellular domain (ECD) in complex with the human monoclonal autoantibodies H22 (left and second left), and K1-70 (second right and right). Antibody light chains are shown in green, heavy chains in blue, and the TSHR ECD in yellow. (left and second left) are different points of view related by rotations of ~180° along a vertical axis as are (second right and right). From Núñez Miguel et al. **58** 25–41.
