**Supplementary Figure 2**

**Figure S2.** Interactions of human dopamine D2 receptor (hD2R) with hMRAPα. Lysates (L) of HEK293 cells transiently transfected with HA-hD2R ± hMRAPα-FLAG were run in parallel with lysates that had been co-immunoprecipitated (IP) with anti-FLAG antibody. Western blotting was performed using anti-HA antibody. Molecular masses (kDa) are indicated on the right hand side of each blot. Bands of interest are indicated on the right hand side of each lane with (胄). (*) indicates heavy and light chains of IgG. 1-8, lane number.
