Figure S1

The bar graph shows the expression levels of cPLA2/β-actin in different groups: control, si-cPLA2-1, and si-cPLA2-2. The y-axis represents the ratio of cPLA2/β-actin, and the x-axis represents the different treatment groups. The graph indicates a significant reduction in cPLA2/β-actin expression in the si-cPLA2 groups compared to the control, with a 83% decrease in the si-cPLA2-2 group.
